

iGEM, the **International Genetically Engineered Machine** program, is the premier undergraduate Synthetic Biology event. This summer, 112 student teams from schools in Asia, Europe, Latin America, Canada, and the US are designing and building simple biological systems from standard, interchangeable parts. These students present their designs and systems at the Championship Jamboree at MIT.

The accomplishments of these student teams during one summer are impressive and will lead to important advances in medicine, energy, and the environment.

iGEM 2010 Special

Sign up now to sponsor **iGEM 2010** and get the following for **iGEM 2009**:

Web presence: sponsor logo on iGEM front page
Sponsor poster at iGEM Championship Jamboree
